ABSTRACT

The present invention relates to compounds of general formula (1) as described in the specification, wherein R⁴ is -SO₂R⁴', -COOR⁴', -COOR⁴', -CONR⁴'₂ or -CSNR⁴'₂; R⁴' is hydrogen, a substituted or unsubstituted alkyl or cycloalkyl residue, a substituted or unsubstituted aryl residue or a saturated or unsubstituted alkyl or cycloalkyl residue, a substituted or unsubstituted aryl residue or a saturated or unsaturated, optionally substituted heterocyclic residue; L is a sulphonamide, ester, keto, urea, thioether, sulphoxide or sulphone unit optionally extended by one or two methylene groups; and X is N, O or S; and their physiologically acceptable salts and stereoisomers. The present invention furthermore relates to a process for the preparation of the compounds of the formula (1), a pharmaceutical composition containing at least one of these compounds, and the use of compounds of the formula (1) for the production of a pharmaceutical composition having integrin-antagonistic action and in particular for the therapy and prophylaxis of cancer, oseolytic diseases such as osteoporosis, arteriosclerosis, restenosis and ophthalmic disorders.
